

Effective immediately, Life Underwriting has ended its COVID-19 vaccination guidelines.

COVID-19 vaccination evidence is no longer necessary to:

- Apply risk assessment credits or make offers to clients with substandard medical histories due to illnesses such as diabetes, asthma, and stroke.
- Offer business-as-usual retention limits.

Clients who have experienced a history of COVID-19, such as a recent infection or ongoing complications, may need more underwriting.

Foreign Travel restrictions around COVID have also been eliminated.

Please note: the guidelines around individuals that currently have COVID or have been hospitalized as a result of complications still apply:

- Tested positive for COVID but are Asymptomatic must wait 2 weeks before applying for coverage.
- Tested positive for COVID, are Symptomatic but with no hospitalization, must wait one month before applying for coverage.
- Any hospitalizations resulting from COVID must wait six months before applying.

\*Please contact your case manager if you have a specific scenario and are unsure how to proceed.
